## The World of Condor Grass

### *“Our Knowledge - your success”*

Condor Grass - a division of The Condor Group of companies from the Netherlands is one of the largest white-label manufacturers in the world of high-end artificial grass solutions for any application that you can imagine. Landscaping, multi-purpose, football, tennis, hockey, golf, rugby, cricket, play areas can all be covered by a product from the Condor Grass portfolio.

Our knowledge and success stems from

- Our experience and expertise in the artificial grass industry
- A state of the art manufacturing facility
- Close partnerships with all the major raw material suppliers
- Endless possibilities and flexibility no matter what your requirement
- Both unique service and stock levels, designed to allow you to market a Condor Grass product with the upmost confidence

With our many years of experience in this ever challenging field, we at Condor Grass are convinced we have a collection that can cover all your artificial grass needs and contribute to your success in this exciting market!

## Lawns and Landscapes

## Lawns and Landscapes

Artificial grass has gained an enormous growth in popularity over the recent years. Where a few years ago people didn't know that artificial grass could be the "perfect" solution for their garden, they are now becoming much more demanding regarding both the look and performance of their grass.

As one of the leading manufacturers of artificial grass we listen carefully to both end users and our customers and use their feedback in our development programme. Then we can offer an innovative, creative and competitive range of landscaping products that will fulfil all your customers demands.

And if you do not find your ideal landscaping grass in our standard collection – we can create it!

No matter if you are an artificial grass specialist, an independent wholesaler or active in the retail industry; we have proven to be a successful partner no matter what your needs.

- 🌿 Inspired by nature
- 🌿 Close to perfection
- 🌿 Natural look and feel
- 🌿 Environmental safe
- 🌿 Child and pet friendly
- 🌿 Unique shaped fibers
- 🌿 UV-stabilized
- 🌿 Resilient
- 🌿 Made and designed in Holland

## Zakura Collection

**"Feel at home outside with Zakura"**  
designed by Condor

## Play areas

One of the most popular applications for our artificial grass is as an outdoor play grass for children's play areas. Whether it is a play area in your garden, a nursery, home or a school play area, artificial grass can offer the perfect solution. The play area will remain green all year round no matter what the weather. No more mud or mess which can then render the outdoor play areas unusable for many weeks in the year. All good news for the children who use them as well as their parents or those who supervise them. Safety is an important issue and the ideal combination for an outdoor play area is to use our play grass with our shock pad underneath.

At Condor Grass we offer 2 products to answer all your play area demands.

**Playgrass:** a dense tufted, sand-filled product made of polyethylene fibrillated fibers.

**Schools:** a very dense tufted, sand dressed product made of texturized, polyethylene monofilaments with narrow blades.

**Both products available in green, red, blue, yellow, white and black.**

Critical Fall Height	Playgrass Sand filled 25kg/sqm	Schools Sand dressed 6kg/sqm
	Shockpad thickness	Shockpad thickness
1.3 m	25 mm	35 mm
1.7 m	35 mm	45 mm
2.1 m	45 mm	55 mm
2.3 m	55 mm	25 + 35 mm
2.7 m	35 + 35 mm	35 + 45 mm
3.0 m	45 + 45 mm	45 + 55 mm

### Zakura at Librije's Hotel

The Librije's Hotel is a five star hotel, owned by 3-Michelin Stars Chef Jonnie Boer and his wife Thérèse. For the finishing touch of the terrace – located in the courtyard of the Librije's Hotel – Jonnie and Thérèse have chosen Zakura as outdoor rug in the colors grey and black.

## Condor Grass and TenCate Grass, cooperation that makes a difference!

Recent years the demand for synthetic turf has changed significantly. Today government bodies and sport clubs prefer synthetic turf sport fields more than ever, as they are convinced of the benefits. Also for landscaping purposes synthetic turf is more often preferred; as a surface for gardens, as decoration of roundabouts and rails or even as a roof covering, synthetic turf offers benefits like less maintenance, a permanent natural and green look, substantial energy- & water savings and on the longer run even a financial saving.

The increasing market demand is also a result of continuous investment in product development and technical innovations. Frontrunner in these fields is TenCate Grass, subsidiary of Royal TenCate, and global market leader. Year by year synthetic turf yarns become more durable and environmentally friendly, resilient and also look and feel has been improved.

Additionally, with four production facilities in Dubai, USA and the Netherlands (2), TenCate Grass meets the highest demands to supply synthetic turf yarns and backing competitive, flexible and ad hoc worldwide.

Next to tufting wall-to-wall rugs Condor Carpets has pioneered with low pile synthetic turf constructions from the beginning of its founding. These days synthetic turf was a surplus to the regular assortment. Today Condor Carpets offers a wide diversity of high- and low pile landscaping systems in many different markets. A milestone is the founding of Condor Grass in 2008.

From the beginning TenCate Grass has been connected to Condor Grass as supplier of synthetic turf yarns- and backing and involved with the grow of Condors synthetic turf activities. Apart from the fact that both companies are located on a stone's throw distance, the real power of the relation is trust of two decades of cooperation with continuous exchange of information- and innovation between two market leaders. This, subsequently, has led to synergy and service towards end-users. In other words, cooperation that makes a difference.

*According to TenCate Grass' sales- & product manager Hein Heerink, Condor Grass is able to offer a mixture of unique USP's: 'the combination of a state-of-the-art, cost leading production facility, a highly experienced & committed management and an excellent, worldwide distribution network, offers a strong value proposition to stakeholders on all levels. Our partnership has lead to synergy between two market leaders and, subsequently, the highest quality and service towards end-users. In other words, cooperation that makes a difference.'*

## Condor Grass Sport Surfaces

### "Creating your field of dreams"

Nowadays both sport clubs, professional and amateur athletes demand the highest quality from their playing surface. The playing surface has to offer:

- 🌿 All-weather playability
- 🌿 Maintenance benefits
- 🌿 Long term quality - durability
- 🌿 High safety performance
- 🌿 Natural shock absorption
- 🌿 Natural abrasion
- 🌿 Natural speed
- 🌿 Natural stability

**Condor Grass has developed a wide range of synthetic grasses for every kind of sport.**

## Condor Grass & XL Turf

### *“The future of artificial turf soccer pitches....”*

Years of research and development came together in 2007 when Condor Grass and XL Turf bonded their knowledge and experience. This unique cooperation resulted worldwide in a large number of high-end installations of non-filled artificial turf football systems.

#### **XL Pro – the system**

The XL Pro turf system is a combination of a very dense and skin-friendly artificial turf installed on a Neopolen® P (EPP)-shock absorption pad.

- 🌿 EPP (expanded polypropylene, 96% air) is an air-elastic shock pad
- 🌿 No intense impacts to the body, air-elasticity of the shock pad absorbs and stores the impact rather than transmitting it to the body
- 🌿 Negligible water absorption
- 🌿 Isotropic deformation performance, regardless of the direction of impact
- 🌿 Moulding density is adjustable to meet specific requirements
- 🌿 Functions reliably over a wide range of temperatures

The XL PRO system is in accordance with the EN 15330 Norm and the FIFA 1 criteria which enables the system to be used for both league and training pitches.

- 🌿 Occasional brushing and vacuuming are the only maintenance work
- 🌿 Usable throughout the whole year due to easy clean of snow and ice
- 🌿 DIN 18035-7, EN 15330-1 certification allows public subsidies for new construction or renovation
- 🌿 Made in Holland – with Swiss know-how
- 🌿 UV-stabilized
- 🌿 Environmental friendly
- 🌿 Free of heavy metals
- 🌿 Continuous shock absorption and energy restitution over the whole lifetime of the system
- 🌿 100% recyclable

## IATS International Artificial Turf Standard

In february 2004 the International Football Association Board decided to integrate the “field surface” including artificial turf into the “laws of the game”. Compulsory testing has been adopted for artificial turf to be used in competition matches between representative teams of National Associations affiliated to FIFA and international club competition matches. The Law I of the game requires that artificial surfaces (Football Turf) be tested according to a stringent set of requirements and certified to either the FIFA Quality Concept for Football Turf or the International Artificial Turf Standard (IATS).

The FIFA Quality Concept for Football Turf and IATS include a series of laboratory tests that are designed to assess performance and durability of the synthetic materials that form the football turf and, most importantly, an assessment of individual football fields to ensure they have the playing and performance characteristics players will expect from a facility certified by FIFA.

The International Artificial Turf Standard and FIFA recommended 1 star are technically identical and all the testing procedures and requirements of a FIFA recommended 1 star certified field also apply to IATS fields.

Official testing to the International Artificial Turf Standard shall only be carried out by independent test institutes accredited by FIFA.

**The International Artificial Turf Standard is not a product approval scheme but is the certification that individual football fields have the required playing characteristics and have been constructed from materials of known quality.**

**Source: International Artificial Turf Standard (IATS) manual, 2012 edition.**

## Soccer

Condor Grass offers a wide range of 3G (third generation) artificial grass products for soccer. All our 3G soccer products are in accordance with the requirements as mentioned in “FIFA Quality Concept for Football Turf” Handbook of Requirements, January 2012 edition”.

### “Dual use pitches”

Combining sports on 1 surface is becoming more and more popular.

Condor Grass offers a 40mm 3G product, installed on a shock-pad which is suitable for both soccer and hockey (IATS & FIH National).

Condor Grass also offers a 60mm 3g product, installed on a shock-pad which is suitable for both soccer and rugby (IATS & IRB Reg 22).

Governing bodies have provided a set of guidelines and minimum standards a synthetic turf system must meet in order to maintain the safety of the athletes and optimal playability of the surface.

**Please contact our sales team for testing reports.**

## Hockey

There is no sport more than hockey which has embraced an artificial grass as the ideal playing surface. At Condor Grass we offer three basic systems that should fulfil your customers demands.

Hockey 24: a dense tufted, sand-filled product made of polyethylene fibrillated fibers.

Hockey SD: a very dense tufted, sand dressed product made of polypropylene knit-de-knit fibers.

Hockey: a very dense tufted, sand dressed product made of texturized, polyethylene monofilaments with narrow blades.

These 3 products can also very well be used to build your ideal multi use game area (MUGA).

**For any other hockey requirement please contact our sales team.**

## Golf

Our extensive "fore golf" collection provides you with extremely realistic yet hardwearing and low maintenance all-weather solutions to all your particular golfing requirements. Our range of golf products include indoor and outdoor putting greens, target greens, artificial turf pathways and lawns, practice golf mats, course and practice golf tees.

## Multi-Use Game Area (MUGA)

Multisport artificial grass fields are ideal for schools, universities and municipalities. Our range offers a performance and budget-friendly sports product playable on a single sports field 24 hours a day all year round.

MUGAs (multi-use games areas) provide a way of maximising the use of a sports area by providing a surface on which a number of different sporting and recreational activities can take place.

As you might expect, a surface which is suited to a range of activities may not be ideal for each individual activity but, with reasonable compromise, It can provide a safe and satisfactory experience for all types of use and all types of athlete.

All multi-sport products can be supplied in four line marking colours, combining tennis (white), mini-football (yellow), basket ball (blue) and volleyball (red) in a single pitch/court.

## Condor Centre Court Collection

Tennis players and authorities continue to demand only the best for their sport and within our Centre Court Collection you will find all textile tennis solutions available on the market for both indoor and outdoor use in one collection where all pace classifications are represented.

A pace classification only gives an indication about the speed of the court and do not mention anything about the quality of the carpet. All our tennis products are in accordance with BS EN 15330-1:2007 (Tennis) and guarantee the high level quality of our carpets.

	Type of product	Collection	Indoor use	Outdoor use	Pace classification	Infill
Challenger	Tufted carpet	Supreme	v		4
